Kurdi,O.B., Conway,A.B. and Davis,R.W.

Plasmodium falciparum 3D7 chromosome 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       On Aug 12, 2000 this sequence version replaced gi:8810449.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 4 contidgs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (21-AUG-1998) Stanford Center, Stanford University, 855

The composition may have a use in gene therapy, and as a vaccine. The recombinate ThpI and the recombination substrates TRT or TRT' sequences are useful for genetic engineering. The kits are useful for InpI-mediated genetic recombination. The TnpI-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified companisms. The present sequence represents the TnpI recognised target

The composition may have a use in gene therapy, and as a vaccine. The recombinase Inpl and the recombination substrates IRF or IRF' sequences are useful for genetic engineering. The kits are useful for Inpl-mediated genetic recombination. The Inpl-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents the Inpl recognised target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A composition comprising recombinase TnpI and the recombination substrate TRT or TRT' sequences, useful for genetic engineering, TnpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                          Sequence 244 BP; 102

                                                                                                                                                                                     The invention relates to a novel composition comprising an isolated DNA molecule comprising TmpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinate TmpI and the recombination substrates TRT or TRT' sequences are useful for genetic engineering. The kits are useful for TmpI-mediated genetic recombination: The TmpI-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episone or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents the TmpI recognised target
                                                                                                                                                                                                                                                                                                                                                                                                             WPI;

functional variant TRT'

The invention relates to a novel composition comprising an isolated DNA molecule comprising TmpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinate TmpI and the recombination substrates TRT or TRT' sequences are useful for genetic engineering. The kits are useful for TmpI-mediated genetic recombination. The TmpI-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episceme or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents a TmpI recognised target (TRT)

                                                                                                                         molecule comprising TnpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinase TnpI and the recombination substrates TnT or TnT' sequences are useful for genetic engineering. The kits are useful for TnpI-mediated genetic recombination. The TnpI-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents a TnpI recognised target (TRT)
                                                                                                                                                                                                                                                                             A composition comprising recombinase TnpI and the recombination substrate TRT or TRT' sequences, useful for genetic engineering, TnpI-mediated genetic recombination, or for gene therapy.
                                                                                                                                                                                                                                                                                                                                                     Stewart FA,

The invention relates to a novel composition comprising an isolated DNA molecule comprising TmpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinate TmpI and the recombination substrates TRT or TRT' sequences are useful for genetic engineering. The kits are useful for TmpI-mediated genetic recombination. The TmpI-mediated site-specific recombination is useful for deletting or inserting DNA sequences to modulate gene expression, integrating new nuclectide sequences into a DNA molecule, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents a TmpI recognised target (TRT) functional variant TRT'
                                                                                                                                                                                                                                                                                                                                     A composition comprising recombinase TnpI and the recombination substrate TRT or TRT' sequences, useful for genetic engineering, TnpI-mediated genetic recombination, or for gene therapy.

                                                                                The invention relates to a novel composition comprising an isolated DNA molecule comprising ThpI recombination substrates. The composition may have a use in gene therapy, and as a vaccine. The recombinase ThpI and the recombination substrates TRT or TRT' sequences are useful for genetic engineering. The kits are useful for TnpI-mediated genetic recombination. The ThpI-mediated site-specific recombination is useful for deleting or inserting DNA sequences to modulate gene expression, integrating new nucleotide sequences into a DNA molecule, such as an episome or genomic DNA, for gene therapy, or for producing food-grade genetically modified organisms. The present sequence represents a TnpI recognised target (TRT)

CC of genes associated with development selected from 87 genes listed in the Cs specification such as ACCPN, ADRN, or APD1 and comprising one of 350 CC useful for the diagnosis or their complements. The invention is CC development genes, in particular disease related to homeobox containing CC genes (HOX), like diabetes, concer, apoptosis related diseases, syndromes CC associated with congenital heart disease, epilepsy, diseases related to fistone deacetylation, Currarino syndrome, diseases related to CC histone deacetylation, Currarino syndrome, diseases related with the CC development of the brain and limb girdle muscular dystrophy and dwarfism. CC Oligomers specific to each of the genes are useful for detecting the CC methylation state of all CpG dinucleotides within the 350 sequences or CC (II) and their complementary sequences, as primer oligonucleotides for CC the amplification of the 350 sequences, (II) and/or their complements and CC as oligomer probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs). Note: The sequence data for this CC patent did not form part of the printed specification but is based on CC sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a nucleic acid (I) comprising a sequence a least 18 bases in length of a segment of chemically pretreated DNA of genes associated with development selected from 87 genes listed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polypoptide (I) comprising an amir acid sequence that has 90 % sequence identity to one of the human cadherin-like asymmetry protein(s) (CIASP)-2 (hCLASP-2A, 2B, 2C, 2E) sequences (PS). (I) is useful for identifying a compound or agent that binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for detecting a CLASP-2 polypeptide in a sample. (II) is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human cadherin-like asymmetry protein(s) (CLASP)-2 for modulating immune response, and for treating multiple sclerosis, rheumatoid arthritis, endometriosis, lupus, autoimmune thyroiditis, septic shock,

inhibiting a immune response in a subject. A pharmaceutical composition comprising a nucleic acid encoding (1), or (II) is useful for preventing or treating a CLASP-2 mediated disease e.g. an autoimmune disease, where the autoimmune disease is caused or exacerbated by increased activity of TH1 cells. CLASP-2 polymucleotides are useful as probes or primers for checation or inhibition) of CLASP-2 expression (e.g., antisense or riboxinon of CLASP-2 expression (e.g., antisense or cholymucleotides can express CLASP-2 polypeptides, produce anti-CLASP-2 polymucleotides can be used in diagnostics (e.g., as probes for CLASP-2 expression), as a lymphocyte marker and for therapeutic C purposes. CLASP-2 polymucleotides can be used in diagnostics (e.g., as probes for CLASP-2 expression), as a lymphocyte marker and for therapeutic collymucleotides can construct transapenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polymucleotides can construct transapenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polymucleotides can treat deficiencies or disorders of hematopoietic cells and can treat deficiencies or disorders of the immune system, by activating or inhibiting the activation, differentiation of immune cells and can treat or detect deficiencies or disorders can increase differentiation and proliferation of haematopoietic cells. CLASP-2 polympetides or centation of haematopoietic cells including the pluripotent stem cells to treat those conformed disorders (e.g., agammaglobulinaemia, exaxia telangiectasia, common variable conformed disorders diseases, multiple sclenosis, hymphopenia, thrombocytopenia, or detect autoimmune diseases, e.g., Addison's disease, haemolytic anaemia, cendence disorders disease, multiple sclenosis, autoimmune thyroiditis, and autoimmune pulmonary conformation or conformation or classes, auticinamia, autoimmune diseases, multiple sclenosis, and autoimmune pulmonary conformation or classes, auticinamia, auticinamia, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7750
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7690
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      155

```
The invention relates to a recombinant entomopox virus (BPV) vector, comprising a polynucleotide encoding a protein operably linked with a heteratologous promoters sequence. The invention also concerns methods for providing gene therapy for genetic deficiency disorders. Vectors of the invention are useful for delivering a polynucleotide encoding a protein to a vertebrate cell preferably a mammalian cell, such as a miman cell.

The vector is introduced into the vertebrate cell by infection in a viral particle, or by transfection, transduction, or injection either in viron or in vivo. The vector is useful for the delivery and expression of biologically useful proteins in gene therapy protocols, and for biologically useful proteins in gene therapy protocols, and for collivering large DNA segments for engineering of vertebrate cells.

Polynucleotides of the invention have applications in techniques such as their use as insertion sites for foreign genes of interest, hybridisation production of sense or antisense mucleic acides, vectors of the invention provide for stable integration and expression of hererologous DNA in host calls, and are adapted for accepting large hererologous polynucleotide colls, and are adapted for accepting large hererologous polynucleotide colls, and are adapted for accepting large hererologous polynucleotide expressed in a stable fraction. The current sequence represents a morner fragment of the genue of the genus B entomopoxvirus from amesacta moorei
                                                                                                                                                                                                                                                                            Novel recombinant entomopox virus vector useful for delivering polynucleotide encoding protein to vertebrate cell, comprises polynucleotide encoding protein operably linked with heterologous
                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 226-242; 326pp; English.

Novel recombinant entomopox virus vector useful for delivering polynucleotide encoding protein to vertebrate cell, comprises polynucleotide encoding protein operably linked with heterologous promoter sequence.

Disclosure; Page 125-150; 326pp; English

The invention relates to a recombinant entomopox virus (EPV) vector, comprising a polymucleotide encoding a protein operably linked with a heterologous promoter sequence. The invention also concerns methods for providing gene therapy for genetic deficiency disorders. Vectors of the invention are useful for delivering a polymucleotide encoding a protein to a vertebrate cell preferably a mammalian cell, such as a human cell.

The vector is introduced into the vertebrate cell by infection in a viral particle, or by transfection, transduction, or injection either in vitrol particle, or by transfection, transduction, or injection either in vitrol or in vivo. The vector is useful for the delivery and expression of biologically useful proteins in gene therapy protocols, and for delivering large DNA segments for engineering of vertebrate cells. Polymucleotides of the invention have applications in techniques such as probes, for chromosome and gene mapping, in PCR technologies, and in the probes, for chromosome and gene mapping, in PCR technologies, and in the probes, for chromosome and gene mapping, in PCR technologies, may in hor probes. provide for stable integration and expression of heterologous DNA in host cells, and are adapted for accepting large heterologous polynucleotide inserts which can be delivered in an infected or transformed cell and ragment of the genome of the genus B entomopoxvirus from amsacta moorei expressed in a stable fraction. The current sequence represents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid retukaemia, Alzheimer's disease, Alz, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 127 ATTAATTGTGTTGTATTAGGTGTTATAAATATAAATCTAGGGGTTTAACGCAACACA 186

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AnDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   71
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid reluxaemia, Alzheimer's disease, Alz, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         96 TITITITIATACAAAAAAAAATAATACAACACAATATTAATTGTGTTGTGTTATAAGGTGTTATAAT 155

The invention relates to nucleic acids containing a sequence of at least 18 mucleotides of chemically treated DNA of genes associated with DNA repair, and their complements. The invention also relates to nucleic acids comprising at least 18 base pairs of the chemically pretreated DNA of genes associated with DNA repair selected from PMS2L1, PMS2L12, PMS2L12, PMS2L2, PMS2L2, PMS2L3, PMS2L3, PMS2L3, PMS2L3, PMS2L3, PMS2L3, PMS2L3, PMS2L3, PMS2L1, PMS2L3, PMS2L
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Q
